

Geophysics 2002

2nd International Conference on the Application of Geophysical and NDT Methodologies to Transportation Facilities and Infrastructure

This is the landing page for the Proceedings of the *Geophysics 2002* conference. The conference was co-sponsored by the Federal Highway Administration and the California Department of Transportation. The conference goal was to enhance the safety, quality and efficiency of highway transportation systems by expanding knowledge of geophysical and non-destructive testing (NDT) techniques. Through exchange of information on state-of-the-art technology, participants gained a better understanding of its applications and limitations to maximize its benefits, enhance engineering practice, improve safety and reduce costs.
