

4-3 Unchecked Details Submittal

The Unchecked Details Submittal is also known as the 65% submittal where the consultant submits unchecked plan details and draft foundation reports for review.

Unchecked details are structure plans with construction details that are generally complete but not yet independently checked. OSFP performs a cursory review of these details in an attempt to identify and raise potential issues that the consultant should consider in preparing subsequent PS&E submittals. OSFP will normally return review comments within three weeks. Occasionally, a longer review period is necessary due to staff availability, workload priorities, and project complexities.

Draft foundation reports undergo a geotechnical review at this stage and comments are normally returned within six weeks.

Contract special provisions are not reviewed at this time and therefore are not submitted.

Sponsoring agencies and consultants should contact the OSFP Liaison Engineer well in advance of the submittal to coordinate the review schedule and to discuss the exact documents and number of copies to submit.

<u>Deliverables</u>	<u>Number of Copies</u>
Unchecked Structure Plans-paper	8
Unchecked Structure Plans-electronic (.dgn, .i)	1*
Draft Foundation Report	5
Draft Foundation Report –electronic (.pdf)	1*
Draft Road Plans -paper	3

*Electronic plan files must be on a separate CD from the foundation report electronic file(s).
